

(Photo from Department of Natural Resources Archives)

Region 5

GENERAL DESCRIPTION

This region encompasses only two counties, Clark and Marathon, and lies mostly outside of the limits of the Wisconsin stage glaciation. Characterized by mainly level to rolling till plains that are predominately silt loam soils. Portions of southern Clark County are poorly drained sandy to loam over shaly sandstone. Forested lowlands are common, especially tamarack and black spruce swamps in the southern portion of the region. Black ash and some northern white cedar exist in the northern portion.

Region 5: Clark and Marathon Counties

RELATIONSHIP OF HABITAT TYPES TO SOIL MOISTURE AND NUTRIENT REGIMES IN REGION 5

Region 5 Habitat Type Descriptions

PmLe-An

Picea-Larix/Ledum-Aronia

Picea mariana-Larix laricina/Ledum groenlandicum
(*Aronia melanocarpa* variant)

Black Spruce-Tamarack/Labrador Tea
(Black Chokeberry variant)

DISTRIBUTION

Clark and Marathon Counties and adjacent regions.

LANDFORM AND SOILS

Deep organics – peatlands.

VEGETATION

Common Forest Cover Types: Stands are dominated entirely by black spruce and tamarack. Only paper birch and white pine occur as temporary associates. Advance reproduction consists almost entirely of black spruce and tamarack, although paper birch saplings are sometimes well represented. Other species that sometimes occur as saplings, but typically do not reach maturity, are red maple, eastern hemlock and yellow birch.

Shrub and Small Tree Layer: Tall shrubs are not well represented. In most stands the only conspicuous species with relatively high coverage is Labrador Tea (*Ledum groenlandicum*). Leatherleaf (*Chamaedaphne calyculata*) typically is the most common low shrub. Canada Blueberry (*Vaccinium myrtilloides*) and Low-sweet Blueberry (*Vaccinium angustifolium*) are also relatively common. Black Chokeberry (*Aronia melanocarpa*) and Black Huckleberry (*Gaylussacia baccata*) were present in about half of sample stands. Several other woody species characteristic of this type are inconspicuous and best described with ground flora.

Leatherleaf (*Chamaedaphne calyculata*)

(Photo from Department of Natural Resources Archives)

Purple-stemmed Aster (*Aster puniceus*)

(Photo from Department of Natural Resources Archives)

Ground Flora Characteristics: *Sphagnum* spp. is a dominant characteristic. Herb species are poorly represented. The following occur with moderate frequencies (50 to 80 percent): Purple-stemmed Aster (*Aster puniceus*), Interrupted Fern (*Osmunda claytoniana*), Spinulose Shield Fern (*Dryopteris spinulosa*), Starflower (*Trientalis borealis*), Wild Lily-of-the-valley (*Maianthemum canadense*) and various species of Lady's Slippers (*Cypripedium* spp.). Also frequent are Swamp Dewberry (*Rubus hispida*) and Shining Clubmoss (*Lycopodium lucidulum*). Less conspicuous are several species of the Heath family (*Ericaceae*) such as Creeping Snowberry (*Gaultheria hispida*), Pale Laurel (*Kalmia polifolia*) and Large Cranberry (*Vaccinium macrocarpon*).

Disturbance and Succession: See the Introduction.

Management Implications: On the relative scale of wetland habitat type productivity (very poor, poor, poor to medium, medium, medium to rich) PmLLe-An is classified as “very poor” (see the **Management Implications** section).

PArGy

Pinus-Acer/Gaylussacia

Pinus strobus-Acer rubrum/Gaylussacia baccata

Eastern White Pine-Red Maple/Black Huckleberry

DISTRIBUTION

Clark and Marathon Counties and surrounding region.

LANDFORM AND SOILS

At the surface, a shallow organic layer is typically less than one foot thick. Mineral soil is clayey sand to depth of more than five feet, or changing to sand at a depth of three to five feet. The year of sampling, the soil profile was saturated to the surface, or at least below two foot depth.

VEGETATION

Common Forest Cover Types: Stand species composition is extremely varied. Most frequent species are red maple, white pine and paper birch, although a number of sample stands had high representation or even dominance of black spruce, jack pine, red pine, quaking aspen or black oak. Advance reproduction is typically sparse. Red maple is most often the dominant sapling. Only white pine, white oak and black oak saplings occurred in more than half of the sample stands.

Shrub and Small Tree Layer: Only low shrubs typically are well represented. Low-sweet Blueberry (*Vaccinium angustifolium*) is best represented, but Black Huckleberry (*Gaylussacia baccata*) was most abundant and characteristic of the type on about 70 percent of the sample stands. Other species with relatively high frequency of occurrence are Raspberries/Blackberries (*Rubus* spp.) and Winterberry (*Ilex verticillata*).

Black Huckleberry (*Gaylussacia baccata*)

(Photo from Department of Natural Resources Archives)

Ground Flora Characteristics: Presence and relatively high cover of *Sphagnum* spp. is characteristic. Other species with high frequency of occurrence are Purple-stemmed Aster (*Aster puniceus*), Starflower (*Trientalis borealis*), Wild Lily-of-the-valley (*Maianthemum canadense*), Swamp Dewberry (*Rubus hispida*), Bracken Fern (*Pteridium aquilinum*), Shining Clubmoss (*Lycopodium lucidulum*), Wintergreen (*Gaultheria procumbens*), and Bunchberry (*Cornus canadensis*).

Disturbance and Succession: See the Introduction.

Management Implications: On the relative scale of wetland habitat type productivity (very poor, poor, poor to medium, medium, medium to rich) **PARGy** is classified as “poor” (see the **Management Implications** section).

ArFnRh

Acer-Fraxinus/Rubus

Acer rubrum-Fraxinus nigra/Rubus hispida

Red Maple-Black Ash/Swamp Dewberry

DISTRIBUTION

Clark and Marathon Counties and surrounding region, more likely in areas of glacial outwash rather than till.

LANDFORM AND SOILS

Shallow organic layer, typically less than one foot thick, over predominantly sandy substrate. Often there is a clay layer within sandy profile with mottling or saturated condition above it.

VEGETATION:

Common Forest Cover Types: Stand species composition is extremely varied. The most frequent species are red maple, paper birch, black spruce, quaking aspen and eastern hemlock, although none were present in more than 50 percent of the study plots. Advance reproduction is typically sparse. Red maple, black ash and Black Cherry saplings each occurred in about one third of sample stands and with modest density.

Shrub and Small Tree Layer: This layer is not well developed. Most common dominant shrubs are Raspberries/Blackberries (*Rubus* spp.), Currants/Gooseberries (*Ribes* spp.) and Winterberry (*Ilex verticillata*). Beaked Hazel (*Corylus cornuta*) was relatively abundant in about half of the study stands.

Ground Flora Characteristics: Presence of *Sphagnum* spp. is characteristic. Other species with high frequency of occurrence are Purple-stemmed Aster (*Aster puniceus*), Starflower (*Trientalis borealis*), Wild Lily-of-the-valley (*Maianthemum canadense*), Swamp Dewberry (*Rubus hispida*), Bracken Fern (*Pteridium aquilinum*) and Bunchberry (*Cornus canadensis*). All other species occur with frequencies under 50 percent.

Disturbance and Succession: See the Introduction.

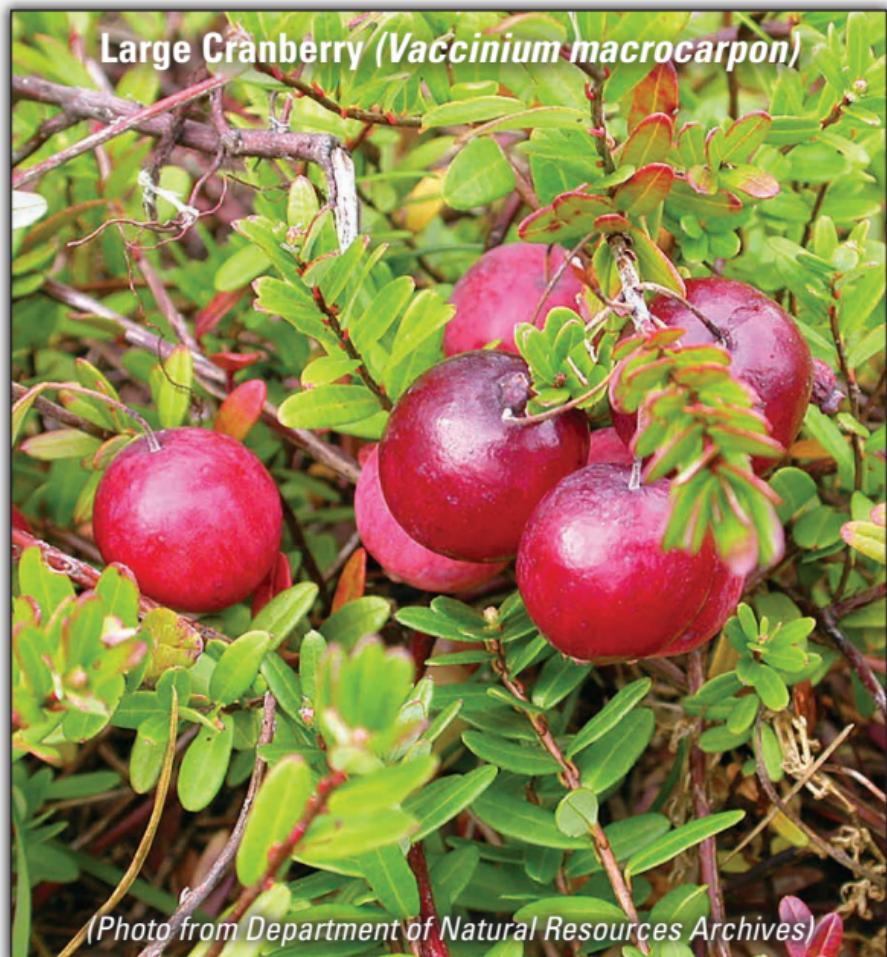

Management Implications: On the relative scale of wetland habitat type productivity (very poor, poor, poor to medium, medium, medium to rich) **ArFnRh** is classified as “poor to medium” (see the **Management Implications** section).

Fraxinus-Acer/Impatiens (Ilex variant)

*Fraxinus nigra-Acer rubrum/Impatiens capensis
(Ilex verticillata variant)*

**Black Ash-Red Maple/Spotted Touch-me-not
(Winterberry variant)**

DISTRIBUTION

Clark and Marathon Counties and adjacent regions; primarily areas of till rather than outwash.

LANDFORM AND SOILS

Typically shallow (less than one foot) organic layer over finer texture mineral soil, e.g., loamy sand, sandy clay loam, loamy clay.

VEGETATION:

Common Forest Cover Types: Black ash is the most consistently present and dominant species, but red maple and quaking aspen are common associates and are dominant in many stands. Conifers are absent or rare.

Shrub and Small Tree Layer: This layer may be well developed or sparse. Most common species are Currants/Gooseberries (*Ribes* spp.), Raspberries/Blackberries (*Rubus* spp.), Winterberry (*Ilex verticillata*), and Common Buckthorn (*Rhamnus cathartica*). In some stands, speckled alder (*Alnus rugosa*) is also well represented.

Ground Flora Characteristics: *Sphagnum* spp. is well represented, or at least present, in most stands. Spotted Touch-me-not (*Impatiens capensis*) was present in about 80 percent of study stands. Other species with a frequency of occurrence greater than 70 percent are Purple-stemmed Aster (*Aster puniceus*), Spinulose Shield Fern (*Dryopteris spinulosa*), Wild Lily-of-the-valley (*Maianthemum canadense*) and Swamp Dewberry (*Rubus hispida*).

Disturbance and Succession: See the Introduction.

Management Implications: On the relative scale of wetland habitat type productivity (very poor, poor, poor to medium, medium, medium to rich) FnArl-Ix type is classified as “medium” (see the **Management Implications** section). It is the richest type in Region 5.

Tree Species Frequency of Occurrence and Average Cover by Size Class

Sawtimber	Freq. %	Cover %
<i>Populus tremuloides</i>	50.....	17.....
<i>Fraxinus nigra</i>	43.....	33.....
<i>Acer rubrum</i>	21.....	19.....
<i>Picea mariana</i>	21.....	24.....

Poles	Freq. %	Cover %
<i>Fraxinus nigra</i>	86.....	24.....
<i>Populus tremuloides</i>	50.....	47.....
<i>Acer rubrum</i>	43.....	16.....
<i>Picea mariana</i>	29.....	35.....
<i>Acer saccharum</i>	21.....	8.....
<i>Abies balsamea</i>	14.....	2.....
<i>Betula papyrifera</i>	14.....	3.....
<i>Ostrya virginiana</i>	14.....	3.....

Saplings	Freq. %	Cover %
<i>Fraxinus nigra</i>	86.....	26.....
<i>Acer rubrum</i>	29.....	20.....
<i>Acer saccharum</i>	21.....	2.....
<i>Betula papyrifera</i>	21.....	4.....
<i>Prunus serotina</i>	21.....	4.....
<i>Ostrya virginiana</i>	14.....	4.....
<i>Tilia americana</i>	14.....	1.....
<i>Tsuga canadensis</i>	14.....	1.....

Large Seedlings	Freq. %	Cover %
<i>Fraxinus nigra</i>	93.....	4.....
<i>Acer rubrum</i>	79.....	1.....
<i>Acer negundo</i>	14.....	1.....
<i>Acer saccharum</i>	14.....	1.....
<i>Betula papyrifera</i>	14.....	2.....
<i>Quercus velutina</i>	14.....	1.....

Large Seedlings	Freq. %	Cover %
<i>Acer rubrum</i>	93.....	1.....
<i>Fraxinus nigra</i>	71.....	1.....
<i>Quercus velutina</i>	57.....	1.....
<i>Populus tremuloides</i>	29.....	1.....
<i>Acer saccharum</i>	21.....	1.....
<i>Picea mariana</i>	14.....	1.....
